

2019 Applications of Mathematics National 5 - Paper 2 Finalised Marking Instructions

© Scottish Qualifications Authority 2019

These marking instructions have been prepared by examination teams for use by SQA appointed markers when marking external course assessments.

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.

General marking principles for National Applications of Mathematics

Always apply these general principles. Use them in conjunction with the detailed marking instructions, which identify the key features required in candidates' responses.

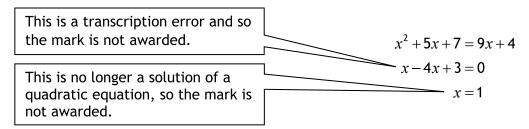

For each question, the marking instructions are generally in two sections:

- generic scheme this indicates why each mark is awarded
- illustrative scheme this covers methods which are commonly seen throughout the marking

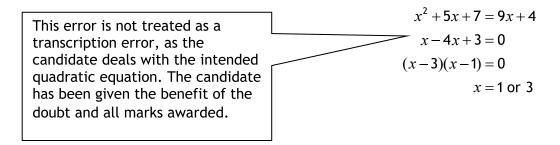

In general, you should use the illustrative scheme. Only use the generic scheme where a candidate has used a method not covered in the illustrative scheme.

- (a) Always use positive marking. This means candidates accumulate marks for the demonstration of relevant skills, knowledge and understanding; marks are not deducted for errors or omissions.
- (b) If you are uncertain how to assess a specific candidate response because it is not covered by the general marking principles or the detailed marking instructions, you must seek guidance from your team leader.
- (c) One mark is available for each •. There are no half marks.
- (d) If a candidate's response contains an error, all working subsequent to this error must still be marked. Only award marks if the level of difficulty in their working is similar to the level of difficulty in the illustrative scheme.
- (e) Only award full marks where the solution contains appropriate working. A correct answer with no working receives no mark, unless specifically mentioned in the marking instructions.
- (f) Candidates may use any mathematically correct method to answer questions, except in cases where a particular method is specified or excluded.
- (g) If an error is trivial, casual or insignificant, for example $6 \times 6 = 12$, candidates lose the opportunity to gain a mark, except for instances such as the second example in point (h) overleaf.

(h) If a candidate makes a transcription error (question paper to script or within script), they lose the opportunity to gain the next process mark, for example

The following example is an exception to the above

(i) Horizontal/vertical marking

If a question results in two pairs of solutions, apply the following technique, but only if indicated in the detailed marking instructions for the question.

Example:

•5 •6
•5
$$x = 2$$
 $x = -4$
•6 $y = 5$ $y = -7$

Horizontal:
$$\bullet^5 x = 2$$
 and $x = -4$ Vertical: $\bullet^5 x = 2$ and $y = 5$ $\bullet^6 y = 5$ and $y = -7$ Vertical: $\bullet^5 x = 2$ and $y = -7$

You must choose whichever method benefits the candidate, **not** a combination of both.

(j) In final answers, candidates should simplify numerical values as far as possible unless specifically mentioned in the detailed marking instruction. For example

$$\frac{15}{12}$$
 must be simplified to $\frac{5}{4}$ or $1\frac{1}{4}$ $\frac{43}{1}$ must be simplified to 43 $\frac{15}{0 \cdot 3}$ must be simplified to 50 $\frac{4}{5}$ must be simplified to $\frac{4}{15}$ $\sqrt{64}$ must be simplified to 8*

*The square root of perfect squares up to and including 100 must be known.

- (k) Commonly Observed Responses (COR) are shown in the marking instructions to help mark common and/or non-routine solutions. CORs may also be used as a guide when marking similar non-routine candidate responses.
- (I) Do not penalise candidates for any of the following, unless specifically mentioned in the detailed marking instructions:
 - working subsequent to a correct answer
 - correct working in the wrong part of a question
 - legitimate variations in numerical answers/algebraic expressions, for example angles in degrees rounded to nearest degree
 - omission of units
 - bad form (bad form only becomes bad form if subsequent working is correct), for example

$$(x^3 + 2x^2 + 3x + 2)(2x + 1)$$
 written as
 $(x^3 + 2x^2 + 3x + 2) \times 2x + 1$
 $= 2x^4 + 5x^3 + 8x^2 + 7x + 2$
gains full credit

- repeated error within a question, but not between questions or papers
- (m) In any 'Show that...' question, where candidates have to arrive at a required result, the last mark is not awarded as a follow-through from a previous error, unless specified in the detailed marking instructions.
- (n) You must check all working carefully, even where a fundamental misunderstanding is apparent early in a candidate's response. You may still be able to award marks later in the question so you must refer continually to the marking instructions. The appearance of the correct answer does not necessarily indicate that you can award all the available marks to a candidate.
- (o) You should mark legible scored-out working that has not been replaced. However, if the scored-out working has been replaced, you must only mark the replacement working.
- (p) If candidates make multiple attempts using the same strategy and do not identify their final answer, mark all attempts and award the lowest mark. If candidates try different valid strategies, apply the above rule to attempts within each strategy and then award the highest mark.

For example:

Strategy 1 attempt 1 is worth 3 marks.	Strategy 2 attempt 1 is worth 1 mark.
Strategy 1 attempt 2 is worth 4 marks.	Strategy 2 attempt 2 is worth 5 marks.
From the attempts using strategy 1, the resultant mark would be 3.	From the attempts using strategy 2, the resultant mark would be 1.

In this case, award 3 marks.

Detailed marking instructions for each question

	Question		Generic scheme	Illustrative scheme	Max mark
1.			•¹ Strategy: know how to calculate percentage increase	•¹ Evidence of 1·07 or equivalent	4
			•² Strategy: identify power	•²² or equivalent	
			•³ Strategy: know how to calculate percentage decrease	•³ Evidence of 0·96 or equivalent	
			• Process: calculate the value of the stamp after 3 years and round to 3 significant figures	• ⁴ 1011·18 = 1010	
	tes:			12//	
			ver with no working 011·17 with no working	award 3/4 award 3/4	
			006·84 with no working	award 2/4	
			ng in pounds, where rounding or truncat		
			t be given to at least 2 decimal places.		
5.	•³ not a	ıvailal	ble 0.96^{n} where n $\neq 1$		
Cor	nmonly	Obse	erved Responses:		
1.	1. For $(920 \times 0.93^2) \times 0.96$ leading to 764 award 3/4 *				
2.	2. For $(920 + 920 \times 0.07 \times 2) \times 0.96$ leading to 1010 award 3/4 $\checkmark \times \checkmark$				√×√√
3.	3. For $(920 \times 1.07^2) \times 1.04$ leading to 1100 award 3/4 $\checkmark\checkmark$				√ / × √
4.	For (92	20×0·	$(93^2)\times 1.04$ leading to 828	award 2/4	× / × /

Q	Question Generic Scheme		Generic Scheme	Illustrative Scheme	Max mark
2.			•¹ Strategy: substitute correctly into cylinder formula	$\bullet^1 \pi \times 1.5^2 \times 4$	4
			• Process: calculate the volume of the cylinder	• ² 28·27	
			•³ Process: calculate the volume of the cuboid	$\bullet^3 \ 4 \cdot 5 \times 10 \times 8 = 360$	
			• Process/communication: find the total volume of the bottle	\bullet^4 360 + 28 · 27 = 388 · 27 cm ³	

1. Correct answer with no working

award 0/4

- 2. ●¹ can be implied by subsequent working
- 3. \bullet^2 is only available for a calculation involving π and a power
- 4. For 4 the correct units must be stated
- 5. 4 is only available for the addition of two calculated volumes
- 6. Accept legitimate variations of π
- 7. For the final answer accept any legitimate rounding or truncation to at least 2 significant figures
- 8. Accept answers given in millilitres or litres

Commonly Observed Responses:

1. $3.14 \times 1.5^2 \times 4 + 360 = 388.26 \text{ cm}^3$

award 4/4 ✓√✓✓

2. $\pi \times 3^2 \times 4 + 360 = 473 \cdot 10 \text{ cm}^3$

award 3/4 ×√√√

3. $3 \cdot 14 \times 3^2 \times 4 + 360 = 473 \cdot 04 \text{ cm}^3$

award 3/4 ×√√√

C	Question		Generic scheme	Illustrative scheme	Max mark
3.	(a)		•¹ Communication: read rate of exchange from graph	● ¹ 0·852	2
			•² Process: calculate amount in pounds	$\bullet^2 \ 0.852 \times 250 = 213$	

- 1. If \bullet^1 is incorrect \bullet^2 is not available for candidates who truncate or round their answer to a whole number of pounds
- 2. 2 is only available for candidates who multiply 250 by any value $0.83 \le x \le 0.86$

Commonly Observed Responses:

1.	$. 0.85 \times 250 = 212.50$	award 1/2 × ✓
2.	$0.842 \times 250 = 210.50$	award 1/2 × √
3.	$. 0.84 \times 250 = 210$	award 1/2 × √
4.	$0.837 \times 250 = 209.25$	award 1/2 ×√

(b)	•³ Strategy/process: calculate exchange rate	• 3 334·80 ÷ 400 = 0·837 or 400×0·837 = 334·80	2
	• Communication: state date consistent with working	• ⁴ 9 December	

Notes:

1. Correct answer with no working

award 0/2

- 2. 4 is only available where calculated exchange rate is a marked point on the graph
- 3. Where candidates choose to multiply, ●⁴ is only available if the answer to one of their calculations is 334⋅80 and date is consistent with the exchange rate

Q	uestion	Generic scheme	Illustrative scheme	Max mark
4.		•¹ Strategy: identify the price of gold	•¹ 1210 and 1140	3
		• Strategy: know how to calculate the percentage loss	$\bullet^2 (1210 - 1140) \div 1210 \times 100$	
		• Process/Communication: calculate percentage loss and round to 2 decimal places	• ³ 5·79	

- 1. Where \bullet^2 is not awarded, \bullet^3 can only be awarded for a calculation of the form $\frac{a}{b} \times c \, (a \neq b \neq c)$, where a, b and c must either be a calculated loss, the values picked in \bullet^1 or 100.
- 2. For •3 multiplication by 100 can be implied by the answer

Commonly Observed Responses:

1. $(1210-1140) \div 1210 = 0.06$

award 1/3 ✓××

 $2 \quad 1210 \div 1140 = 1.06$

award 1/3 ✓××

۷.	2. 1210÷1140=1·00			awaru 1/3	V
5.			•¹ Strategy: know how to find arc length of quarter or semi-circle		5
			•² Process: calculate curved edge of one quarter circle or semi-circle	• ² 15·7or 31·4	
			• Process: calculate perimeter of swimming pool	$\bullet^3 2 \times 15 \cdot 7 \dots + 2 \times 10 + 2 \times 36 \cdot 5 = 124 \cdot 4 \dots$	
			• Strategy: know how to calculate number of lengths	$\bullet^4(\ldots-2\times1\cdot25)\div3$	
			• Process: calculate number of lengths, appropriate rounding and calculate cost	•5 40·6 leading to 41×11·49 = 471·09	

Notes:

- 1. •² is available for candidates who carry out a correct quarter circle or semi-circle calculation to find arc length or sector area
- 2. 3 is not available to candidates who use area in an attempt to find perimeter including the use of $A = \pi d$
- 3. is only available for 11.49 multiplied by the appropriately rounded answer to 4
- 4. 5 is not available if the length of railing required is a multiple of 3
- 5. 5 is not available if there is no evidence of where the number of lengths come from
- 6. Accept legitimate variations of π

Commonly Observed Responses:

1. $\pi \times 10 \div 4 = 7 \cdot 85...$ leading to 413.64

award 4/5 ✓×✓✓✓

2. $(2 \times 15 \cdot 7... + 2 \times 36 \cdot 5) = 104 \cdot 4...$ leading to 390.66

award 4/5 √√×√√

3. $124 \cdot 4... \div 3 (= 41 \cdot 46...)$ leading to $482 \cdot 58$

award 4/5 ✓✓✓×✓

4. $(124 \cdot 4... + 2 \times 1 \cdot 25) \div 3 (= 42 \cdot 3...)$ leading to 494.07

award 4/5 ✓√✓×✓

Q	Question		Generic scheme	Illustrative scheme	Max mark
6.			•¹ Process: calculate total selling price	\bullet^1 375 × 5·20 = 1950	3
			•² Process: calculate 2·7% of total selling price	\bullet^2 1950 × 0·027 = 52·65	
			•³ Process: calculate profit	\bullet^3 1950 - (1687·50 + 52·65) = 209·85	
			Alternative Strategy		
			•¹ Process: calculate 97·3% of one share	$\bullet^1 5.20 \times 0.973 = 5.0596$	
			•² Process: calculate profit of one share	\bullet^2 5.0596 - 4.50 = 0.5596	
			•³ Process: calculate profit	\bullet^3 375 × 0·5596 = 209·85	

1. Correct answer with no working

award 0/3

2. In original strategy, where \bullet^2 is not awarded, \bullet^3 is only available if a percentage of their total selling price or the total buying price is calculated

3. In alternative strategy, where \bullet^1 is not awarded, \bullet^3 is only available if a percentage of the selling price or buying price is calculated

4. For candidates who use alternative strategy accept a final answer of 210

Commonly Observed Responses:

1. 1950×1.027 leading to an answer of 315.15

2. $(1950 - 1687.50) \times 0.973 = 255.41$

3. 1950 - 1687.50 = 262.50

award 2/3 ✓×✓ award 2/3 ✓✓×

award 1/3 ✓××

Question		on	Generic Scheme	Illustrative Scheme	Max mark
7.	(a)	(i)	•¹ Process: calculate mean	$ \bullet^1 (2.5 + 4.5 + 3.7 + 3.1 + 3.8 + 3.4) $ $ \div 6 = 3.5 $	1
Note	٠٥:				

Commonly Observed Responses:

(ii	i) • Process: calculate $(x - \overline{x})^2$	• 1,1,0.04,0.16,0.09,0.01	
	• 3 Strategy/process: substitute into formula	$\bullet^3 \sqrt{\frac{2 \cdot 3}{6 - 1}}$	
	• Process: calculate standard deviation	• ⁴ 0·678	
	Alternative strategy • 2 Process: calculate $\sum x$ and $\sum x^2$	•² 21 and 75·8	
	• Strategy/process: substitute into formula	$\bullet^3 \sqrt{\frac{75 \cdot 8 - \frac{21^2}{6}}{6 - 1}}$	
	• Process: calculate standard deviation	• ⁴ 0·678	

Notes:

1. Correct answer with no working

award 0/3

- 2. Accept rounding or truncation to at least one decimal place for final answer
- 3. 4 can only be awarded for a calculation involving at least two-step including a division and a square root has taken place

Commonly Observed Responses:

(b)	• Communication: comment regarding mean	• eg on average weights in 2017 are higher	2
	• Communication: comment regarding standard deviation	•6 eg the weights in 2017 are more consistent
