## Setup

### **Teams**

Create a new class team. This one is called Test.

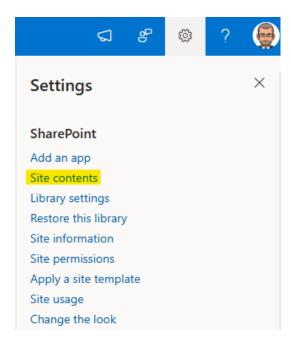

### **SharePoint**

In the SharePoint site of the class team, create a list and a document library.

SharePoint can be accessed via the **General** channel and the **Files** tab. It can take a few minutes after the team is created for the site to be accessible.

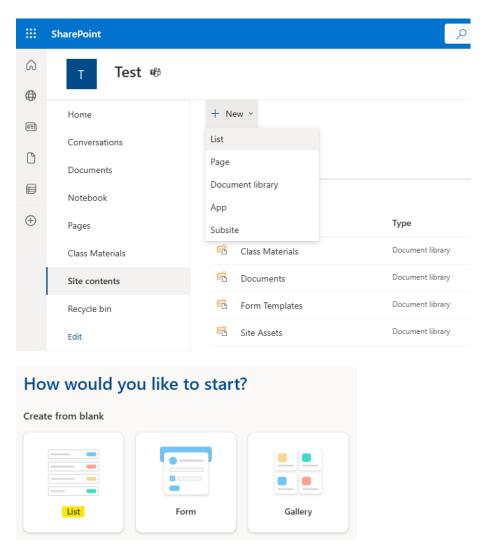

Access the Site contents.

### List

#### Create

Create a new list.

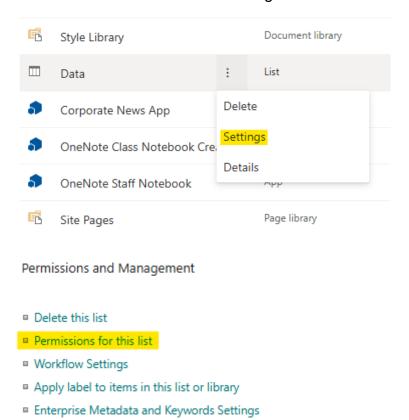

The list is called **Data**. It is used to hold the details of the pupils.

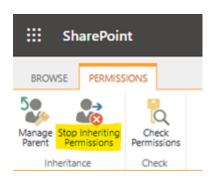

### Modify

#### **Permissions**

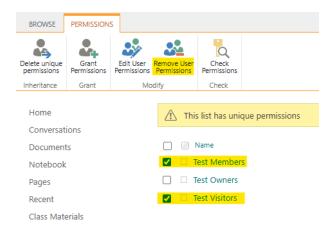

Access the site contents to edit the settings of the list.

### Stop inheriting permissions.

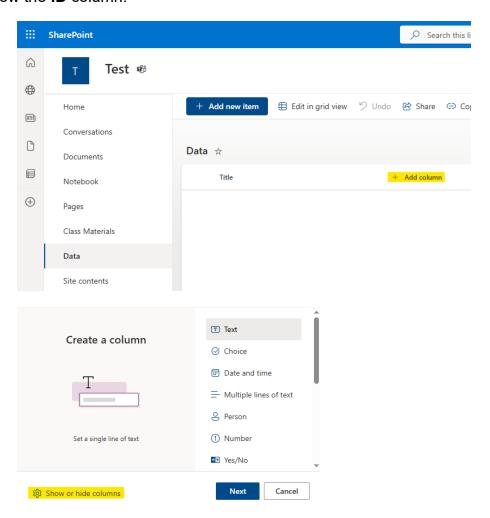

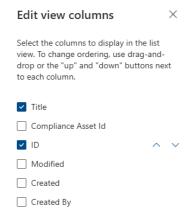

#### Remove non-owners.

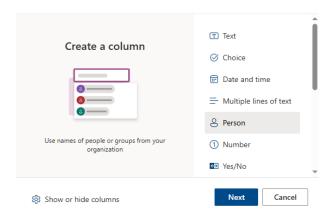

#### **List Columns**

### Show the **ID** column.

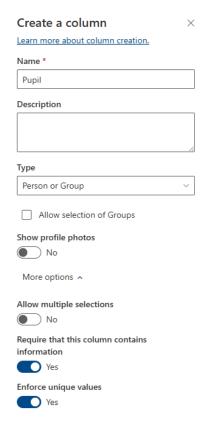

### Add a *Person* column.

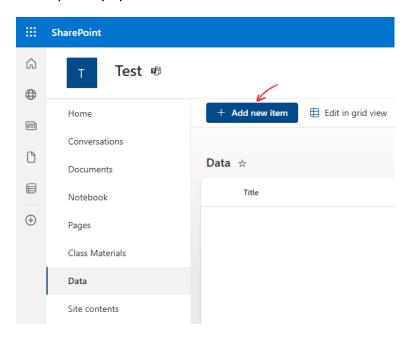

### This one is called **Pupil**.

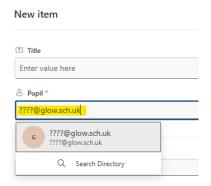

### **Add Pupils**

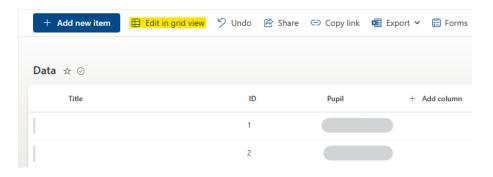

Add the required pupils.

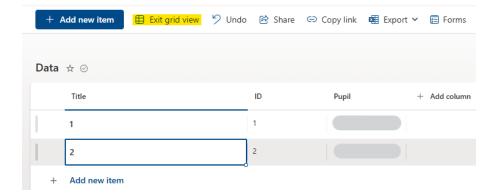

Glow email addresses can be used.

### Update Title to match ID.

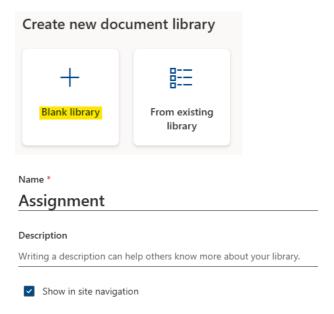

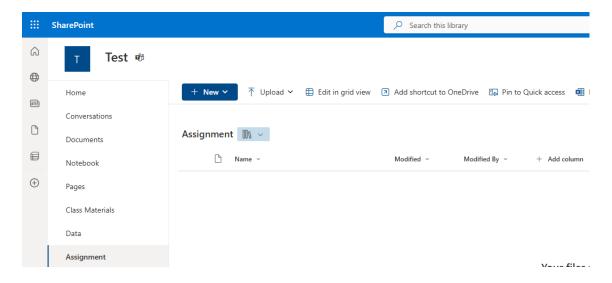

### **Document Library**

#### Create

Create a document library using the same steps for creating a list.

The document library is called **Assignment**. It is used to hold the pupils' files.

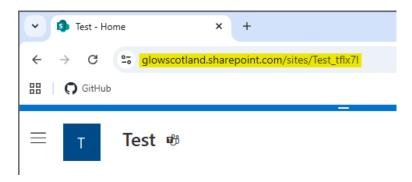

## Modify

## **Permissions**

Modify the permissions and remove non-owners using the same steps for the list.

### **Power Automate - Create & Share**

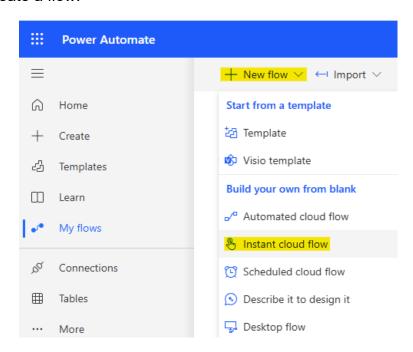

Power Automate will require the site address of the SharePoint site:

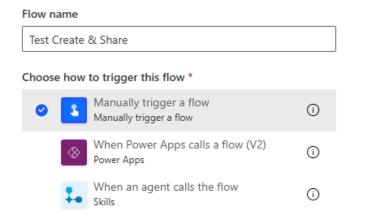

The address will be shown in various drop-down lists.

#### **Create Flow**

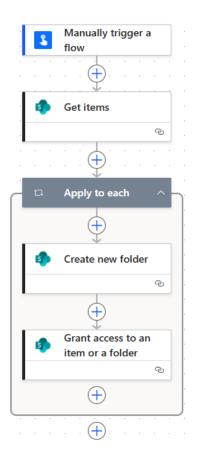

Create a flow.

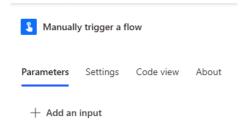

This one is called **Test Create & Share**.

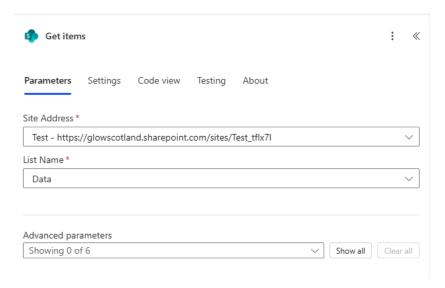

### Code

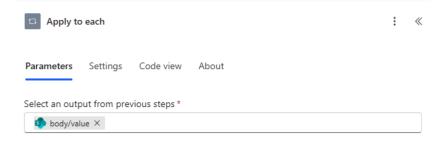

### Manually trigger a flow

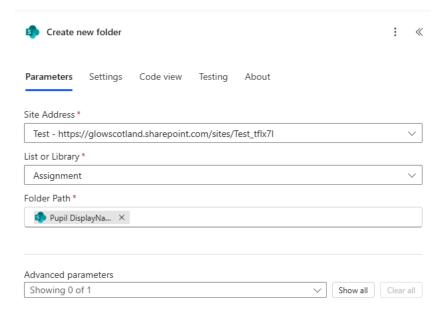

#### **Get Items**

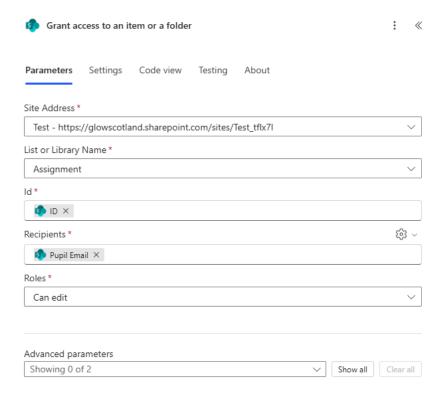

### Apply to each

#### Create new folder

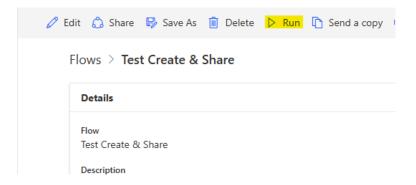

### Grant access to an item or a folder

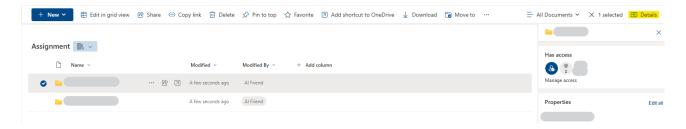

### **Run the Flow**

#### Save and run the flow

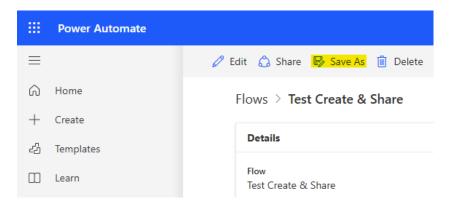

### Check the result.

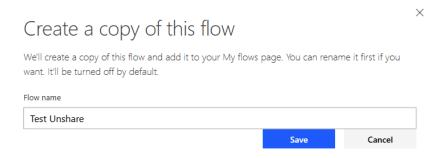

### Power Automate - Remove access to Folders

### **Duplicate Flow**

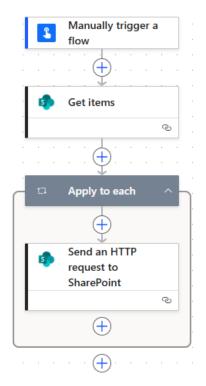

This one is called **Test Unshare**.

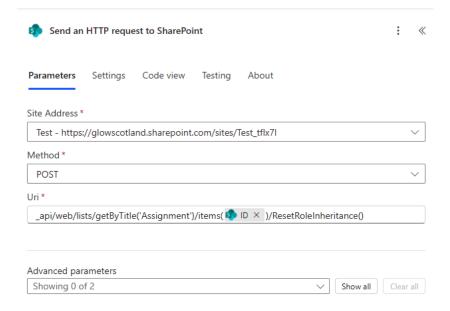

### **Edit Flow**

Change the Apply to each block:

#### Send an HTTP request to SharePoint

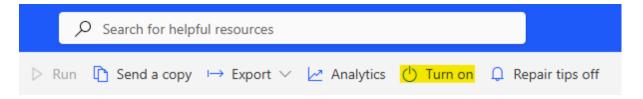

#### Uri:

\_api/web/lists/getByTitle('Assignment')/items(@{items('Apply\_to\_each')?['ID']})/Reset RoleInheritance()

#### Turn on and Run

Turn on the flow.

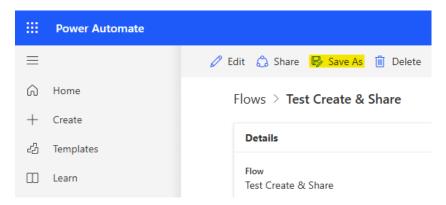

Run the flow.

Check the result.

### **Power Automate – Grant access to Folders**

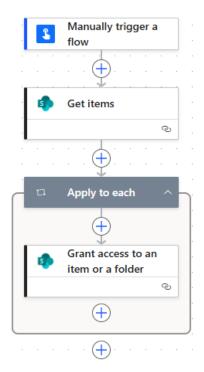

### **Duplicate Flow**

This one is called **Test Share**.

### **Edit Flow**

Change the Apply to each block:

### Turn on and Run

Turn on and run the flow. Check the result.
