Computing Science

TUESDAY, 22 MAY 1:00 PM - 3:00 PM

Mark

Full name of ce	ntre			Town	
Forename(s)		Sur	name		Number of seat
Date of bir					
Day	Month	Year	Scottish car	ndidate number	

Total marks — 110

SECTION 1 — 25 marks

Attempt ALL questions.

SECTION 2 — 85 marks

Attempt ALL questions.

Write your answers clearly in the spaces provided in this booklet. Additional space for answers is provided at the end of this booklet. If you use this space you must clearly identify the question number you are attempting.

Use **blue** or **black** ink.

Before leaving the examination room you must give this booklet to the Invigilator; if you do not, you may lose all the marks for this paper.

SECTION 1 — 25 marks Attempt ALL questions

1. State a graphic file type suitable for storing an animated logo.

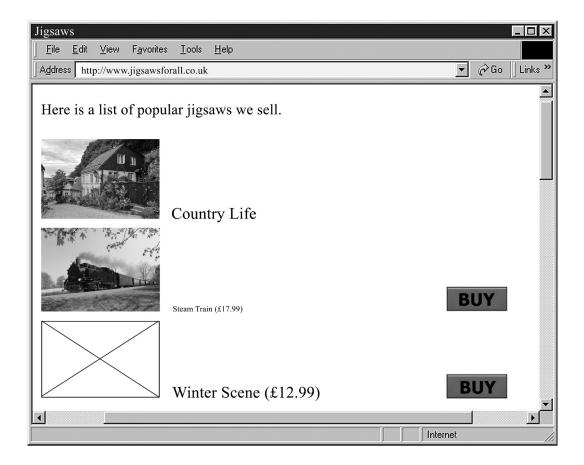

1

2

Comp Sys

2. The web page below was created to sell jigsaws online.

WDD

DDD

A shop stores stock information in a database. Part of the database table is shown below.

Stock							
stockCode	type	description	price	quantity			
2374	Vase	Blue with floral pattern	12.40	1			
3467	Book	Satellite Games	0.45	2			
4576	Book	Organic Farming	0.45	1			
186	Garden	Hand fork	0.90	1			
8964	Jigsaw	Picture of Culzean Castle	1.00	1			
3647	DVD	The 49 Steps	0.45	1			
762	Book	Baking Pies	0.45	1			

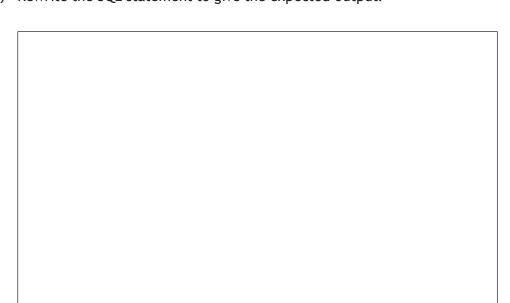

The manager writes the following SQL statement to change the price of all books to 50p.

UPDATE Stock

SET price = 0.50

WHERE price = 0.45;

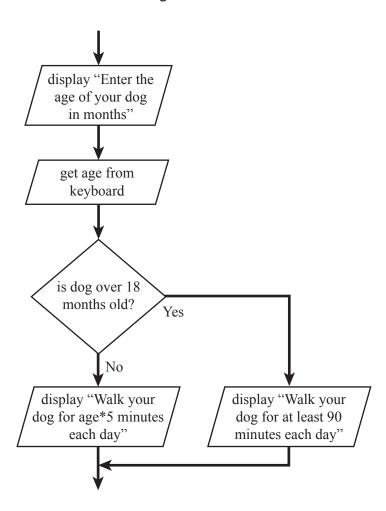

- (a) Explain why the SQL statement above would give an unexpected result.
- 2 (b) Rewrite the SQL statement to give the expected output.

SDD

The design shown below asks a user to enter the age of their dog. It then displays advice on how many minutes the dog should be walked each day.

Circle the condition in the design below.

12. Explain why low-fidelity prototypes are used when designing a website. 1

WDD

NA

13. Eduardo has created a website to display photos that he has taken.

Explain why Eduardo did not have to consider the Copyright Designs and Patents Act when creating his website.

1

The program code below calculates the delivery cost of orders.

SDD

SDD

Line 13 IF orderTotal < 50.00 AND NOT(cardType = "Platinum") THEN</pre> Line 14 SET deliveryCost TO 5.00 Line 15 ELSE Line 16 SET delivery TO 1.50 Line 17 END IF Line 18 SEND deliveryCost TO DISPLAY (a) Explain why the program may not display the expected output at line 18. (b) Identify one logical operator in the above code. 1

(c) State the delivery cost for the following order.

Card Type: Gold Order Total:

43.00 1

Explain why a conditional loop would be used when writing code. 1

16. A database table 'TeamScore' stores information about a team's top scorers. The table is shown below.

DDD

TeamScore							
competitor	club	averageScore					
R. Oliver	Fairmilehead	92.0					
G. Byer	Currie	92.5					
K. Willis	Peterborough	91.4					
B. McRae	Dunfermline	97.0					

Describe what would happen to the table when the SQL statement below is run.

> DELETE FROM TeamScore WHERE averageScore < 92.0;

SDD

19. A program is being designed that will allow pupils to add money to their lunch money account. The user enters their name, an 8 character password and the amount of money they want to add. A button is then clicked and the updated balance of the account is displayed.

(a) Analyse the problem and identify all inputs, processes and outputs.

Input(s) _____

Process(es) _____

Output(s) _____

(b) Design a user interface for this program.

3

- (c) The password must contain 8 characters.
 - (i) State a suitable pre-defined function to check that the password contains 8 characters.

1

(ii) Explain why a pre-defined function would be used.

1

19. (continued)

SDD

(d) Using a design technique of your choice, design an efficient solution to ensure that a password of only 8 characters can be entered.

An error message should be displayed if the incorrect number of characters is entered, and the user asked to re-enter the password.

(e) Test data will be used to ensure the validation of the password works correctly.

Complete the test table below.

3

Type of test	Input	Expected result
Normal		Program continues
	Jaj8up	

20. A database stores information about a walking club.

DDD

The table 'Route' stores all the available routes.

The table 'Walk' stores information when one of these routes is completed.

Part of the information stored in each table is shown below.

Route											
routeID	start	finish	estimatedMins	Kms	routeType	rating					
1	Shiel Bridge	Glen More	480	23	Mountain	5					
2	Aberdour	Anstruther	600	44	Coastal	4

page 21

21. A program will calculate the total cost when customers purchase tickets to a theme park.

Adults pay £25 per ticket; children pay £10. If there are two or more adults with more than two children a discount of £5 is subtracted from the total cost.

Algorithm

SDD

- 1. Store cost of adult and child ticket
- Get name of person making booking 2.
- Get quantity of tickets 3.
- 4. Calculate total cost
- 5. Display food voucher message

Refinement

- 2.1 Get first name
- 2.2 Get second name
- 3.1 Get quantity of adult tickets
- 3.2 Get quantity of child tickets

MARKS DO NOT WRITE IN

WRITE IN THIS MARGIN

21. (continued)

SDD

(b) Customers who spend £50 or more on tickets qualify for a number of food vouchers.

Step 5 of the algorithm has been implemented below.

. . .

Line 23	TF	totalCost	/	50	ТНЕИ
	T L	LULAILUSL	_	20	TUUIN

Line 24 SEND "Sorry, no food voucher" TO DISPLAY

Line 25 ELSE

Line 26 IF totalCost >100 THEN

Line 27 SEND "You have been awarded 2 food

vouchers" TO DISPLAY

Line 28 ELSE

Line 29 SEND "You have been awarded 1 food

voucher" TO DISPLAY

Line 30 END IF

Line 31 END IF

. . .

(i) State the output if:

(A) the total cost is 104;

1

(B) the total cost is 50.

1

(ii) When the completed code is tested, a user enters 2.5 for the number of adult tickets.

The program continues to run and calculates the total cost.

Explain how the program could be made fit for purpose.

1

Comp Sys

(iii) State the processor component that calculates the total cost.

1

Comp Sys

(iv) Name the part of the computer system that transfers the value of totalCost from main memory to the processor.

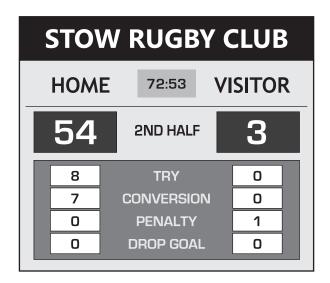

1

page 23

22. An electronic scoreboard is operated by a computer system.

Comp Sys

(a)	The computer	system	stores	the	time	and	scores	as	binary	numbers	and
	the text using	extende	d ASCII	coc	le.						

(i)	In the box below, show how the 8-bit binary number.	ie value 54	would be	stored	as an

(ii)	Calculate the number of bits required to store the text '2ND HALF'.	2

AARKS	DO NOT
	THIS
	MARGIN

22. (continued)

Comp Sys

(b) The scoreboard highlights some of the information it displays using coloured objects. These are stored as vector graphics.

(i) State the name of the object.

(ii) State two attributes of this object.

Attribute 1

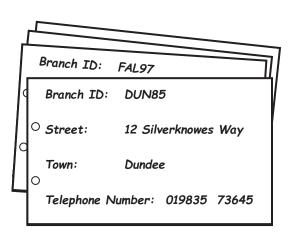

Attribute 2

(c) Describe a feature or function of the computer system that could be used to reduce the amount of energy it uses.

1

23. Sydney Bakery owns three high street shops in Dundee, Falkirk and Perth.

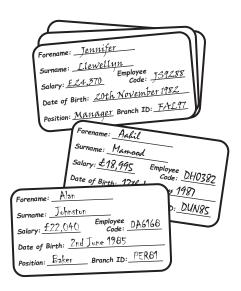

The bakery wishes to design and implement a database to store the information shown below.

DDD

Examples of Shop Information Cards

Currently typed up by staff and kept as printed copies.

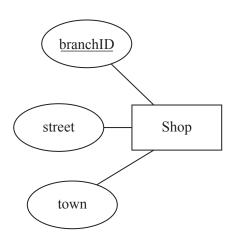

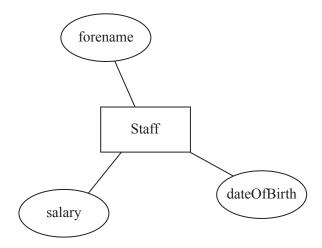

Examples of Staff Information Cards

Currently hand written by each shop manager and kept for reference.

- (a) Complete the entity relationship diagram below by:
 - drawing any missing attributes from either entity
 - drawing the relationship between the entities
 - naming the relationship between the entities
 - identifying any additional key fields.

6

23. (continued)

MARKS DO NOT WRITE IN THIS MARGIN

1

DDD

(b) As well as an entity relationship diagram, a data dictionary is created at the design stage.(i) State the purpose of a data dictionary.

(ii) The attribute 'town' will store the place where each shop is located. A presence check has been noted in the data dictionary for this field.

1

23. (continued)

WDD

(c) Sydney Bakery also maintains a website.

Part of the HTML code for the home page is shown below.

```
<style>
.mainHeading {text-align:right}
h2 {text-align:center}
div {text-align:left}
</style>
</head>
<body>
